- |                                                  |                                                     |
|--------------------------------------------------|-----------------------------------------------------|
| ● Activated Dermal Fibroblast (Col1a2 ER-stress) | ● Fibroblast (activated inflammatory)               |
| ● Activated Dermal Fibroblast (TNC PRRX1)        | ● Fibroblast (fetal PDGFRA)                         |
| ● Activated Endothelial Cell                     | ● Hair Follicle Keratinocyte (stem cell)            |
| ● Activated Monocyte (CD11b+)                    | ● Heterogeneous Epithelial-Neural Cluster           |
| ● Acute Graft-Response Macrophage                | ● IFNγ-Conditioned Macrophage                       |
| ● Arg1+ Macrophage                               | ● IL33+ Inflammatory Fibroblast                     |
| ● Basal Epithelial Cell (Trp63+)                 | ● Immunoregulatory Myeloid Cell (CXCL12-high)       |
| ● Basal Keratinocyte (Epcam+ Cd44-high)          | ● Inflammatory Macrophage (Fcgr1+ primed)           |
| ● Basal Keratinocyte (HF-stem stress)            | ● Inflammatory Macrophage (GRN+ chemokine)          |
| ● Basal Keratinocyte (Klf5+ Gata3+)              | ● Interferon-Activated Macrophage                   |
| ● Basal Keratinocyte (LGR5+ SOX9+)               | ● Interferon-Responsive Regulatory Macrophage       |
| ● Basal Keratinocyte (hemidesmosome collapse)    | ● Keratinocyte (E-cad+, suprabasal)                 |
| ● Basal Keratinocyte (proliferative progenitor)  | ● Keratinocyte (Trp63+, basal)                      |
| ● Basal Keratinocyte (proliferative wound)       | ● Lipid-Associated Macrophage                       |
| ● Basal Keratinocyte (senescent ER-stress)       | ● M2-like Macrophage                                |
| ● Capillary Endothelial Cell                     | ● Macrophage (Arg1+ glycolytic)                     |
| ● DAMP-Responsive Macrophage                     | ● Macrophage (CD68+ phagocytic)                     |
| ● Dermal Adipocyte (biosynthesis)                | ● Macrophage (IFN+ M1/M2)                           |
| ● Dermal Fibroblast (Col1a2 inflammatory)        | ● Macrophage (TREM2+ resident)                      |
| ● Dermal Fibroblast (MMP chemokine)              | ● Monocytic MDSC (Ccr2+)                            |
| ● Dermal Fibroblast (Neat1 stress)               | ● Myeloid-Endothelial Doublet                       |
| ● Dermal Fibroblast (Pdgfra complement)          | ● Outer Root Sheath Keratinocyte (Sox9+ Trp63+)     |
| ● Dermal Fibroblast (complement graft)           | ● Phagocytic Macrophage                             |
| ● Dermal Fibroblast (complement interferon)      | ● Proliferating Keratinocyte                        |
| ● Dermal Fibroblast (complement signaling)       | ● Regenerating Skeletal Muscle Cell (PAX7+)         |
| ● Dermal Fibroblast (interferon macrophage)      | ● Skeletal Muscle Cell (myoblast/myotube)           |
| ● Dermal Fibroblast (perivascular LPL)           | ● Skeletal Muscle Fiber (IIB/IIX)                   |
| ● Differentiated Keratinocyte                    | ● Stress-Activated Basal Keratinocyte (proteotoxic) |
| ● Endothelial Cell (angiogenic pericyte)         | ● Stress-Adapted Dermal White Adipocyte (lipolysis) |
| ● Endothelial Cell (early EndMT)                 | ● Stress-Responsive Epithelial Cell (TP63- KRT71+)  |
| ● Endothelial Cell (partial EndMT)               | ● Stressed Skeletal Muscle Fiber (glycolytic)       |
| ● Endothelial Cell (smooth muscle EndMT)         | ● Stromal Fibroblast                                |
| ● Epidermal Keratinocyte (DSG1+, E-cad+)         | ● Tissue Macrophage (F13a1+ efferocytic)            |
| ● Epidermal Keratinocyte (stress-responsive)     | ● Tissue-Resident Macrophage (Grn+ CD163+)          |
| ● Epithelial Progenitor Cell (Lgr5+ Sox9+)       | ● Wound-Associated Macrophage                       |
| ● Fibroblast (Lmna perivascular)                 |                                                     |
